PROFESSIONAL SUMMARY

Software Engineering Master's student with 3+ years of experience in backend development, Java-based systems, and scalable APIs, seeking full-time Software Engineering opportunities.

TECHNICAL SKILLS

Programming Languages: Java, Python, C++, C#, SQL

Backend & Frameworks: Spring Boot, Spring MVC, Hibernate, ASP.NET Core, REST APIs, Microservices Architecture

Frontend & Web: Javascript, ReactJS, NodeJS, HTML, CSS

Databases: MySQL, MongoDB, DynamoDB

Cloud & DevOps: AWS, Docker, Kubernetes, Git, Github, CI/CD Pipelines

PROFESSIONAL EXPERIENCE

Software Engineer II, Dell Technologies, Bengaluru, India

March 2023 – July 2024

- Developed backend systems with Spring Integration, RabbitMQ, and IBM MQ to reliably process 1000+ transactions per minute.
- Deployed cloud-native Spring Boot applications on Pivotal Cloud Foundry (PCF), leveraged auto-scaling and containerization to improve system scalability by 50% while significantly reducing manual maintenance overhead.
- Designed a proactive monitoring and alerting framework using enterprise telemetry tools to identify bottlenecks in real-time, reduced critical system downtime by 40% and improved the overall customer experience.
- Strengthened enterprise security posture by implementing OAuth 2.0 protocols for centralized authentication and authorization, ensured 100% compliance with corporate security audits and protected sensitive data.
- Modernized legacy code reliability by expanding JUnit test coverage from 15% to 70%, significantly optimizing SonarQube quality metrics and preventing production regressions.

Software Engineer I, Dell Technologies, Bengaluru, India

September 2021 – March 2023

- Refactored legacy ASP.NET web applications from SOAP to RESTful APIs, which accelerated response times by 30% and enhanced architectural scalability.
- Automated HashiCorp Vault credential rotation via CI/CD pipelines, eliminating manual intervention and standardizing update cycles to four times per year.
- Created a Data Export System that fetched, filtered and transformed data from databases to generate CSV files and securely uploaded them to clients' NAS paths periodically, ensuring reliable and latest data delivery.
- Optimized internal support workflows by implementing a Python/NLTK chatbot, resulting in a 20% drop in ticket volume.

Software Engineering Intern, Cognizant, Chennai, India

March 2021 – August 2021

- Constructed a responsive banking interface using Angular with integrated form validations, decreasing data-entry errors by 25% for financial modules.
- Engineered scalable backend REST APIs with Spring Boot to automate account statement generation, which improved reporting efficiency and ensured high reliability for data retrieval.
- Streamlined bug detection by authoring automated test cases, improving development lifecycle performance and software quality metrics.

EDUCATION

Master of Science in Software Engineering

May 2026

Arizona State University, Tempe, AZ

3.89/4

Bachelor of Technology in Computer Science and Engineering

May 2021

Dehradun Institute of Technology, Dehradun, India

7.41/10

PROJECTS

Harmony - Content Management Platform

Fall 2025

- Architected a clean CMS UI supporting no-code content updates (sections, pages, assets) using React and Typescript.
- Built a secure admin service with auth-protected endpoints, HttpOnly cookies, strict CORS, and password hashing.
- Implemented role-based access control (RBAC) and content permissions to support administrative and operational workflows.

SyncBoard - Project Management Tool

Summer 2025

- Designed scalable backend APIs in Spring Boot with JWT authentication and MongoDB, deployed via AWS EC2 and Docker.
- Integrated GitHub Webhooks for real-time event tracking, demonstrating end-to-end system reliability.

GraceLang - Beginner Friendly Programming Language

Spring 2025

- Built an educational programming language, leveraging skills in language design, syntax/semantics implementation, structured programming, and Prolog and Java integration.
